How to assemble and get the best out of your new Massage Recliner
Thanks for choosing Celebrity

Thank you for choosing a Celebrity Massage System, which we hope will give you many years of comfort and enjoyment.

Your new Massage System offers you the latest in massage technology – all at the touch of a button. Now you can experience the benefits of a vibrating massage or a soothing back heat, in the comfort of your chair.

To get maximum benefits from the system, please spend a few minutes reading the following instructions. By fully understanding the method of operation of the system, you will be able to gain maximum benefit from it.

These instructions should be read in conjunction with our Operating and Care Instruction leaflet, which is attached to your chair. Should no copy of the Operating and Care Instructions be attached to this chair, please contact our Customer Services Department on 01623 440 626 or email us at customerservices@celebrity-furniture.co.uk

Important

This unit is intended for relaxation purposes only and should not be used in an attempt to treat any medical ailment.

Please note that should you have any medical condition, be under a health professional or physicians care or should you have a medical device fitted (eg Pacemaker etc.) you must consult a qualified medical practitioner, before using this massage system.

* Do not massage any part of the body that is painful, swollen, inflamed or covered with skin irritation – consult your medical practitioner before use.

* The massage system should not be used during pregnancy.

* Do not at any time allow children to play on the chair or leave them unsupervised, in the same room as the chair.

* Never operate this appliance if it has a damaged cord or plug. Contact your supplying retailer.

* Do not interfere with any part of the massage system or attempt to dismantle or repair the unit in any way.
Assembly and connections

Your chair is supplied with the base and the back as separate units. To assemble the chair hold the back and fabric flap with both hands. Line up the male and female brackets on the base and back. Apply downward force to the back and the connectors will fit into one another.

Then connect the massage leads as follows:

**Lead 1 - Heat Pad** (White connector)
Connect the lead (A) from the back of the chair to the corresponding lead in the base.

**Lead 2 – Motor** (Blue ring on connector)
Connect the lead (B) from the back of the chair to the corresponding lead in the base.

**Lead 3 – Power** (Red ring on connector)
Connect the lead (C) to the transformer unit supplied with the chair. Next connect the plug lead to the transformer and plug in to the power socket.

Your massage system is now ready for use when the power is switched on.

Connections from back of chair

Connections from base of chair

By following these step by step assembly instructions your new massage recliner will be ready to use.
First Use
We recommend that the unit be used only for a few minutes initially, to allow your body to get used to the massage sensation. Gradually increase the length of time you use the massage function, over the first few periods of use. Should you experience any adverse reactions, stop using immediately and consult your medical practitioner.

Personal Use Only
The unit is designed and guaranteed for personal, home use only. Do not use for any commercial purpose, as this will invalidate the guarantee.

General Information
**NOISE:** As with any motorised system which uses vibration to activate the motion, there will be an amount of noise and vibration. This is particularly prevalent around the upper back area, where the ears are more sensitive to any noise and vibration from the motors situated in the back of the chair.

Additionally, noise may be emitted from the footrest, when no leg pressure is applied and the footrest is in the closed position. This is due to the fact that for safety reasons (to reduce the risk of possible damage from entrapment between footrest and chair) the reclining mechanism situated under the chair, features a sprung-loaded footrest. The springs in the footrest may transmit a vibration noise, until the weight of the legs reduces the amount of vibration transmitted to the springs. Further vibration may be caused by some of the metal action mechanism parts vibrating against each other and causing a noise.

Service
Never attempt to repair or service this unit yourself. Should you have any service requirements, always contact your supplying retailer, in the first instance.

Guarantee
Your Massage System is fully guaranteed for 12 months from the date of purchase, providing that it has been used in accordance with our Operating Instructions.

This guarantee covers any failure of the system due to manufacturing defects within this period, providing the chair has been used for domestic use only. Any use of the chair for commercial purposes invalidates the guarantee.

Please note that this guarantee does not cover any instances of misuse of or damage to the chair.
Your Chair Explained

The picture below shows all 5-massage zones, plus the heat pad that is contained in your massage chair.
The section on pages 6 and 7 explains how your handset will give you the best results from your massage system.

Please Note:
Please note that anyone with a medical device (e.g. pacemaker) or medical condition must consult with their doctor/healthcare professional before purchasing a massage system.
**Your Massage Handset Explained**

*To get the best results from your Massage System, it is essential that you first understand the functions of the handset. Please take a little time to fully acquaint yourself with these functions and then adjust the speed and intensity of the massage, to suit your own requirements.*

1: **Power**

This button switches the massage system on or off. Depress the button to switch on (please note that the handset buttons will illuminate and the display will confirm that the massage system is active). To switch off, depress the button again.

The massage system is programmed to allow 15 minutes of continual use, before automatically switching itself off.

Please note, when left inactive, the LCD illumination will switch off after 30 seconds, but will leave the functional buttons selected illuminated, until the system automatically switches itself off after 15 minutes.

When the massage system is switched off, the handset retains the last settings in its memory. When switched back on, the massage will automatically start with the last used settings.

Please note: the power button is designed to illuminate at all times (even when the rest of the handset is not illuminated) to show that the massage system has been successfully connected to the power supply.
Zone Selection Control

Please follow the steps below to get the best results from your massage system.

2. Zone Selection Control
To choose the zones you wish to operate, simply press the appropriate zone selection buttons from 1 to 5. Each button offers individual control of the selected zone, from top of the back (1) to the calves (5). As each button is selected, the zone button will glow and the display will confirm active zones. (Blue zones on LCD indicate active zone).

3. Pre-Programmed Functions
Your massage system is equipped with 3 pre-programmed functions for your enjoyment:

Wave: Offers complete head to toe massage by operating each selected zone in turn, starting at the top back (zone 1) and working through to the calves (5).
This programme can be operated at any level of intensity and at any speed (see sections 4 & 5). You can select/de-select any zone by pressing the zone button (see section 2). Pressing the Wave button will return the system to the Manual zone select option.

Tap: On activation all selected zones are operated together in short bursts. Tap can be used on any combination of zones, or on all 5 zones at once. This programme can also be adjusted to operate at any level of intensity and at any speed (see sections 4 & 5). You can also select/de-select any zone by pressing the zone button (see section 2). Pressing the Tap button will return the system to the Manual zone select option.

Swell: This function offers a rolling massage to each zone sequentially, vibrating from minimum to maximum selected intensity. Swell can be used on any combination of zones, or on all 5 zones at once. Swell can also be adjusted to operate at any level of intensity and at any speed (see sections 4 & 5). You can also select/de-select a zone by pressing the zone button (see section 2). Pressing the Swell button will return the system to the Manual zone select option.

4. Intensity
The system offers varying levels of intensity, from a gentle massage, at the lowest level, to a more vigorous effect at maximum intensity. Press the intensity + or – button to increase or decrease the intensity. The LCD display will confirm the intensity level selected.

5. Speed
The speed selector only works when the Wave, Tap or Swell pre-programmed functions are selected. The speed selection offers varying speeds from slow to fast. Press the intensity + or – button to increase or decrease the intensity. The LCD display will confirm the intensity level selected.

6. Heat - & +
The Heat buttons operate differently to the Intensity & Speed buttons in that they only switch the Heat Pad on (+) or off (-). You cannot increase or decrease the operating temperature of the heat pad with these buttons.

Once activated a red heat symbol appears in the LCD. This will extinguish along with the LCD display after 15 seconds but the heat pad will remain fully operational.

The heat pad is fitted with a pre-set thermostat, which, once the pad attains its operating temperature, cycles on and off to maintain the pre-set level of heat. The pad automatically switches off after 15 minutes use.
This Massage Recliner
User Guide should be read
in conjunction with
Celebrity’s recliner
Operating and Care
Instructions booklet and
should be kept for future
reference.
